

# VistaLINK school

## DAY 1

- » Introduction to VistaLINK
- » Hardware/Software setup & device discovery
- » Device Configurations
- » Advanced Control
- » Thumbnail Server

## DAY 2

- » Redundant Server
- » Alarm Monitoring
- » Services
- » Auto Response
- » IntelliGain

## DAY 3

- » IntelliTrak
- » Web Graphics
- » Advanced Techniques

Contact Evertz customer service admin at [csa@evertz.com](mailto:csa@evertz.com) for full booking arrangements.

Please RSVP at least one month in advance of any scheduled training event.

**Space is limited, so please book early.**

Day 1-2-3  
For Integration & Administration

Day 2-3  
Refresher for past students & discover new advanced features

Day 1-2  
For Operation & Administration

Day	1	2	3
November 7, 8, 9 — 2023	5	6	7
February 6, 7, 8 — 2024	4	5	6
June 4, 5, 6 — 2024	2	3	4
November 5, 6, 7 — 2024	3	4	5

\* (Offered annually Tuesday through Thursday during the first full week in Feb/June/Nov)

## DAY 1

The Day 1 training seminar provides introductory and foundation building blocks for creating and managing VistaLINK® PRO SNMP management systems. Attendee's of the Day 1 training seminar will learn the physical topology of the system from a hardware and software perspective. The attendee will develop an understanding of advanced control and hardware maintenance from VistaLINK® PRO standard interfaces. He or she will be familiarized with Engineering, Operator and Administrator monitoring/control practices using VistaLINK® PRO. A personal computer will be provided to

the attendee which will enable them to participate in various tutorials throughout the training seminar.

Day 1 will be broken down into functional sections to help develop the learning curve for building and using VistaLINK® PRO as a management system. The attendees will be able to engage in small activities throughout the lessons to practice and familiarize themselves with the various features of the VLPRO application. The list below summarizes the major topics covered on Day 1.

### **Setting Up the System**

Preparing Hardware to Work with VistaLINK®  
IP Configuration for both  
Hardware and Software

### **Introduction to VistaLINK® PRO-C**

What is VistaLINK® PRO?  
Configuring Modules  
SNMP Basics

### **Introduction to Server/Client Applications**

Advanced Configuration Skills  
Advanced Features  
Launches  
Macros  
User Account Control  
Administrative Functions  
IntelliGain®  
IntelliTrak™

### **Thumbnail Server**

Thumbnail Server Install and Client Setup  
Thumbnail Configurations for Device Hardware  
Viewing Thumbnails

## DAY 2

The Day 2 training seminar will provide students with basic to intermediate knowledge of the automation functions of VistaLINK® through the Auto Response application. This seminar not only provides information on how to use the tools but it also provides strategies on developing visual monitoring interfaces for real world environments. Attendees will work through various tutorials using a personal computer.

Students will learn how to use alarm monitoring and advanced controls, such as auto-response and DVLs. This session will provide information on automating facility monitoring and configuration operations or limiting false alarming by scheduling changes based on times & dates or events.

Personal computers will be provided to each attendee, which will enable them to engage in various activities throughout the seminar. The list below summarizes the major topics covered on Day 2.

### Alarm Monitoring

- General Operation
- Configuring Alarm Systems
- Hardware Management
- Software Management

### Services

- View Services
- Create Services for Grouping Hardware

### Advanced Control

- Auto Response — System Automation
- Based on Timed or Alarm Events
- MVP Integration

### Redundant Server

- Configuring Redundant Server
- for High Availability

# VistaLINK school

## DAY 3

Attendee's partaking in Day 3 of the VistaLINK® school will be taught how to install and maintain a +WEB Graphics system through a provided personal computer. The attendee will learn how to build basic drawings and use advanced techniques for developing systems in the VistaLINK® Graphics Client.

This session will provide information importing facility block diagrams and/or generating an offline simulation using virtual equipment and graphics from the

VistaLINK® media library. It will also teach the attendee how to link multiple views for the most effective facility or application presentation.

The attendees will be able to engage in small activities throughout the lessons to practice and familiarize themselves with the various features of the Graphics application. The list below summarizes the major topics covered on Day 3.

### Basic Graphics

- Introduction to Tools
- Develop Basic VistaLINK® Drawing Skills

### Advanced Graphics

- Learn Advanced Techniques for Developing a System

### Template Substitution

- Multi-Channel Systems
