Evertz is aware of PHP related security advisory CVE-2026-109618 and CVE-2026-109619 which cites a detected vulnerability in PHP.

These advisories cite the potential for remote command execution via specific methods.
Evertz takes security extremely seriously and is actively working on the correction for this CVE for certain affected products.

Note that exploitation of this CVE would require someone to fully breach the security posture of the relevant facility and gain direct access to the network and the device in question.

Please contact your local Evertz representative for more detailed information on product updates being worked on.
