

1. OVERVIEW

Officially named Spring4Shell vulnerability (CVE-2022-22965), Spring4Shell is a critical vulnerability in the Spring Framework, an open source platform for Java-based application development. Spring4Shell is severe because if attackers exploit it, applications can be vulnerable to remote code execution (RCE).

2. EVERTZ EXPOSURE

Evertz, as a company, is not vulnerable to these exploits.

We have investigated on a product-by-product basis, and can conclusively say that none of our product lines are affected. These unimpacted products include, but are not limited to: Mediator, MAGNUM, inSITE, VUE, VLPro and DreamCatcher as well as the majority of our 3484/3482/3480 platforms (TXEs and MUXers), Multiviewers, MMA10G and UXP, RF & 78xx series platforms.

If you have any questions or concerns, please contact Evertz Customer Service at:
