

IMMEDIATE RELEASE

Evertz joins Babcock’s Team INSPIRE to support next-generation strategic communications for the Canadian Armed Forces

Canadian technology leader to contribute secure networking and real-time operational infrastructure expertise to Babcock-led defence communications team

Burlington, Canada. June 10, 2026 – Evertz Microsystems Ltd., a subsidiary of Evertz Technologies Ltd (TSX: ET), is a Canadian-owned technology leader in mission-critical operational infrastructure, secure networking and real-time communications solutions, today announced its role as a member of Team INSPIRE, a Babcock-led, Canadian-enabled industry team established to deliver advanced strategic communications capabilities for the Canadian Armed Forces.

Led by Babcock Canada, Team INSPIRE brings together Canadian industry partners with specialized expertise in defence communications, networking, engineering, manufacturing, integration and sustainment. The team includes Babcock, Nautel, CCX Technologies, Evertz, WADE Antenna, Titan AEX and COWI.

Together, Team INSPIRE is focused on delivering modernized high-frequency, low-frequency and very-low-frequency strategic communications capabilities to help ensure secure and reliable connectivity wherever, whenever and however it is needed. The team will also pursue Canadian development of key current and emerging technologies to provide the Canadian Armed Forces with an operational edge and position Canadian technology for global export.

“Strategic communications are the backbone of military readiness. For Canada, the ability to communicate securely and reliably across distance, complexity and contested environments is essential to sovereignty, resilience and operational effectiveness,” said Romolo Magarelli, President & CEO, Evertz Microsystems Ltd. “We are pleased to join Babcock’s Team INSPIRE and work alongside Canadian industry partners to help deliver a modern communications capability designed in Canada, for Canada, and built to support the Canadian Armed Forces wherever they are called to serve.”

Evertz will contribute network hardware to help enable reliable connectivity, extend coverage and support secure, interoperable communications across the Team INSPIRE network.

At the heart of Team INSPIRE’s offering for Canada is Babcock’s integration approach, which leverages Babcock’s Intelligent Network and Serial Protocol Interface for Radio Equipment (INSPIRE) control system software. The INSPIRE solution is currently deployed across Australia, New Zealand and the United Kingdom.

Team INSPIRE’s approach is designed to support the seamless integration of legacy, current and emerging systems, while enabling the adoption of sovereign Canadian technology as it develops. Built on a scalable and interoperable architecture, the INSPIRE solution will help the Canadian Armed Forces adapt to evolving operational demands and maintain a technological edge in complex environments.

Evertz's participation reflects the company's longstanding commitment to Canadian engineering, advanced manufacturing and mission-critical technology development. Headquartered in Burlington, Ontario, Evertz supports government, defence, broadcast and critical infrastructure customers worldwide with secure operational infrastructure, RF-over-IP transport, visualization, synchronization and real-time networking solutions.

As Canada advances its defence modernization priorities and strengthens domestic industrial capability, Evertz is proud to contribute to Canadian-led initiatives that support operational readiness, long-term resilience and the development of sovereign defence technology.

About Evertz

Evertz is a Canadian-owned technology company specializing in secure operational infrastructure, RF-over-IP transport, visualization, synchronization, and real-time networking solutions supporting government, defence, and critical infrastructure environments. With significant Canadian engineering and manufacturing capabilities, Evertz supports sovereign modernization and interoperability initiatives across Canada and allied environments.

Evertz Microsystems Ltd., a subsidiary of Evertz Technologies Ltd (TSX: ET), is a Canadian-owned technology leader delivering mission-critical operational infrastructure, secure networking and real-time communications solutions for government, defence, broadcast and critical infrastructure environments worldwide. Headquartered in Burlington, Ontario, Evertz designs, engineers and manufactures advanced operational networking, visualization, data transport and communications technologies supporting highly secure and always-on mission-critical environments. Evertz represents a strategically important Canadian engineering and advanced manufacturing capability supporting sovereign operational readiness, operational coordination, ISR transport and command environments for Canada and allied partners in more than 70 countries worldwide.
